

G E O[®]
SPECIALTY CHEMICALS

COMPANY PROFILE

the leader in a select group
of specialty chemicals

Industries worldwide are making the discovery – when the need is specialty chemicals, the solution is GEO Specialty Chemicals, Inc.

Founded in 1993, GEO has grown through strategic acquisition and commitment to niche markets to become a leading supplier of specialty chemicals. GEO markets include: water treatment; coating and resin additives; specialty acrylic monomers; plus a broad range of dispersants, surfactants, and other additives for the concrete admixtures, synthetic rubber polymerization, gypsum processing and oil well drilling markets.

GEO holds a number one global position in additives for high performance alkyd and polyester liquid and powder resin coatings using TRIMET[®] Trimethylolethane and environmentally friendly aqueous polyurethane dispersion resins using DMPA[®] Dimethylolpropionic Acid.

GEO, through its Bisomer range, is a leading global supplier of specialty acrylic monomers which are essential building blocks used to enhance resin performance and meet stringent health, safety and environmental regulations in a wide variety of coating, adhesive and specialty polymer applications.

GEO is the number one producer of LOMAR[®] and DAXAD[®] naphthalene sulfonate products used as dispersants in the oil field, concrete, and polymerization industries and number one producer of DILOFLO[®] dispersant used in the gypsum board industry. Our oil field offerings include lubricants for high temperature/pressure long reach drilling; dispersants and defoamers used during the cementing stages; friction reducers used for hydraulic fracturing and coil tubing and corrosion inhibitors.

GEO is the leading domestic manufacturer of Glycine in North America out of its Deer Park, TX facility. Glycine, also known as aminoacetic acid, is the simplest amino acid and is commercially sold as a white, free flowing, crystalline solid. GEO offers three grades of Glycine: USP-NF Pharmaceutical grade, USP-NF grade, and Technical grade.

GEO is a leading U.S. producer and marketer of aluminum sulfate and a leader in the market for ULTRAFLOC[®] and ULTRAPAC[®] aluminum-based flocculants and coagulants in water treatment and papermaking.

specializing in the
chemistry of
growth

Strong and versatile manufacturing capability is key to this leadership. Many GEO plants are strategically located near major paper mills in the southeast, for instance, reducing shipping and inventory costs to those customers. Extremely flexible in their abilities to produce and formulate multiple products, GEO facilities meet customers' specialized needs for customized products.

GEO Specialty Chemicals, Inc. is proud of its reputation for quality service and solving customer problems. The company is committed to meeting requirements and exceeding expectations for quality, delivery and service each and every time. These qualities have not only made GEO an industry leader, but they also add value for GEO customers to be more competitive and effective in their own businesses.
